

## Press Release

### MPL selected to build cyber security system

Baden Dättwil, April 18, 2023

More and more companies are considering the deployment of cyber security systems as a crucial part of their business operations. To withstand any possible cybercrime, a Dutch organization has issued a tender for supplying the purchase of cyber security systems. In close cooperation with our long-term Dutch distributor Arcobel, MPL AG completed an extensive design process that resulted in a cyber security system which offers an optimal solution for the requirements and needs of the customer. As a result, MPL and Arcobel have been awarded the contract for the high-tech security hardware. The contract will operate for a four-year period.

Due to confidentiality reasons, we are not allowed to publish the name of the organization and the specific requirements of the cyber security systems. Remy Loertscher, Key Account Manager former CEO of MPL AG: "We deliver rugged embedded hardware to the various sectors where reliable systems are needed. The Swiss produced and designed quality products support security systems for hospitals, airports, transportation system and defense application with both, standard and custom-made products. We are pleased to offer this contractor a future-proof solution for their specific cyber security needs. The contractor can trust that any possible digital vulnerability is reduced to a minimum, and they are therefore free to focus on their core business."

#### **About the Company**

MPL AG is located in Switzerland and was founded in 1985. Since the beginning, MPL stands for robust designs, long-term availability, low power consumption, and fanless concepts. The MPL embedded computer products and network solutions are designed from scratch to succeed in extended temperature and meeting the high demands of rugged environments. All products are engineered and produced in Switzerland. The MPL products are used in Transport & Rail, Industrial automation, Infrastructure, IoT, Cybersecurity & Surveillance, Marine & Offshore, Defense & Aerospace and Healthcare.
