

MPL celebrates its 25th anniversary

Design and production of durable electronics solutions for the highest requirements

Since 1985, MPL AG has been the industry leader in developing and manufacturing rugged, fanless electronics, and embedded systems for customers demanding high quality. MPL's commitment to design highest reliable, low power consumption, extended temperature, and long life-cycle products as well as to be self financed, are the cornerstones of our success.

MPL delivers durable High-Tech electronic boards and systems for nearly all kind of applications. In the past 25 years, our product range grew constantly and includes today:

- Compact Industrial PCs with Intel embedded CPUs up to Core 2 Duo in robust flexible housings
- Embedded CPU boards with diff. form factors and technologies (Motorola, PowerPC, ARM, and Intel)
- Panel PCs up to 19" with a protection level up to IP65, in stainless steel or aluminum housings
- PC/104-Plus and mezzanine peripheral boards for the rugged environment
- Custom and OEM electronics solutions with highest reliability
- PC Card Reader/Writers as desktop and open frame versions

Common to all these MPL products are the design rules to operate in a low power system, fanless under harsh conditions, and in a wide temperature range. Of course they offer the robustness and reliability to be used under extreme, as well as under normal conditions. Furthermore through a good selection of the components, we provide to the customer a long term product availability to save investments and avoid costly replacements.

Over the time, we developed various chassis, a wide array of I/O products, and many unique and useful add-on modules. This diversity allows us to provide fully integrated solutions that are

customized to specific applications and offer highest flexibility.

An additional key factor is the HW-related software which is developed and supported in-house. This allows us to offer customized BIOS/driver support to meet your needs.

Beside our unique Portfolio, MPL convinces with an unparalleled after-sales support that comes direct from our design engineers. We also maintain our own parts inventory, which allows us to ensure service and repair for decades.

MPL products are found operational on land based applications, on and below the high seas, the sky above, as well as in space. Low power consumption, extended temperature, high reliability and long durability have become the MPL trademark.

Companies all over the world rely on MPL products since 1985. We would like to take this opportunity and say thank you for your trust and are looking forward to a continued cooperation in the coming years.
